

# Coordinating After Natural Hazard Events to Document the Performance of the Built Environment: The Structural Extreme Events Reconnaissance (StEER) Network

**Tracy Kijewski-Correa**

*Director*  
University of Notre Dame

**Khalid Mosalam**

*Associate Director for Seismic Hazards*  
University of California, Berkeley

**David O. Prevatt**

*Associate Director for Wind Hazards*  
University of Florida

**Ian Robertson**

*Associate Director for Coastal Hazards*  
University of Hawaii, Manoa

**David Roueche**

*Associate Director for Data Standards*  
Auburn University

**StEER: Building Resilience through Reconnaissance**

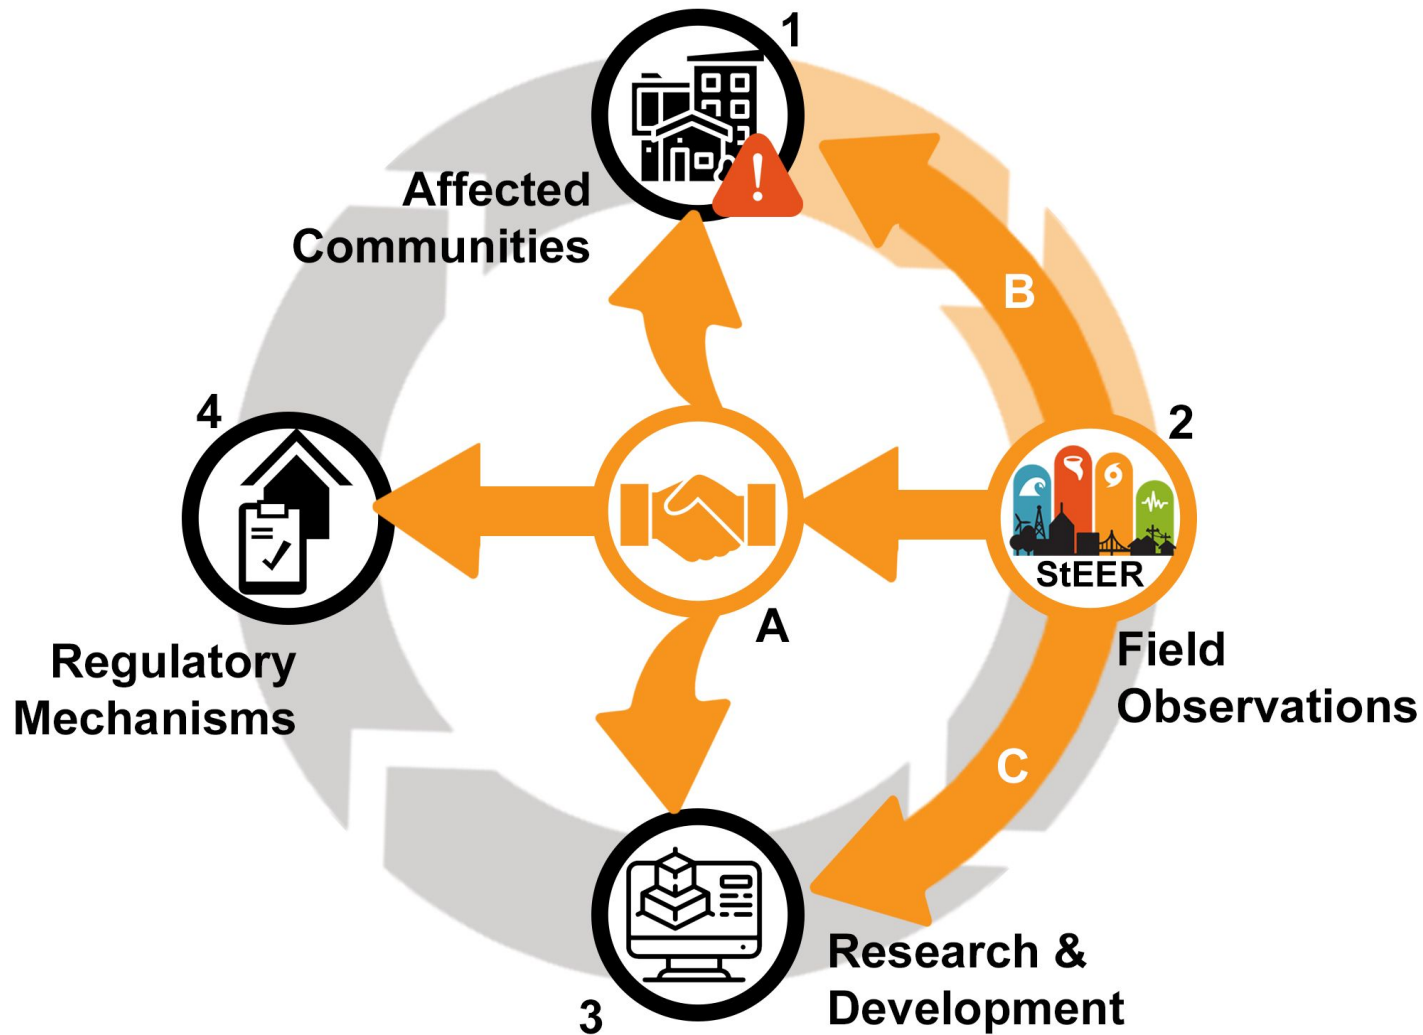

# WEBINAR LEARNING OBJECTIVES

Through this webinar you will learn:

- StEER's approach and event response models
- Modes for member engagement through field and virtual structural assessment teams
- Assessment methodologies/technologies
- Role of data standards in delivering well-documented, quality controlled data suitable for diverse re-uses

# DATA-TO-KNOWLEDGE LIFE CYCLE

# APPROACH

## CAPACITY

promoting **community-driven standards**, best practices, and training for field reconnaissance

## COORDINATION

coordinating **early, efficient and impactful** event responses

## COLLABORATION

broadly engaging communities of **research, practice and policy** to accelerate learning from disasters

## PRIMARY OUTCOMES:

- High-quality communal datasets documenting performance of built environment, intended for broad re-uses
- Synthesis of collective knowledge disseminated to wide audiences

Hurricanes

Tornadoes

Earthquakes

Storm Surge  
and Tsunami

# StEER MEMBERSHIP STRUCTURE

**300+**

**Approved Applicants**

### Standardized Data Fields

- Investigation Notes
- Building Attributes
- Structural Attributes
  - Walls and Foundation
  - Fenestration
  - Roof Structure
- Wind-induced Damage
- Surge-induced Damage

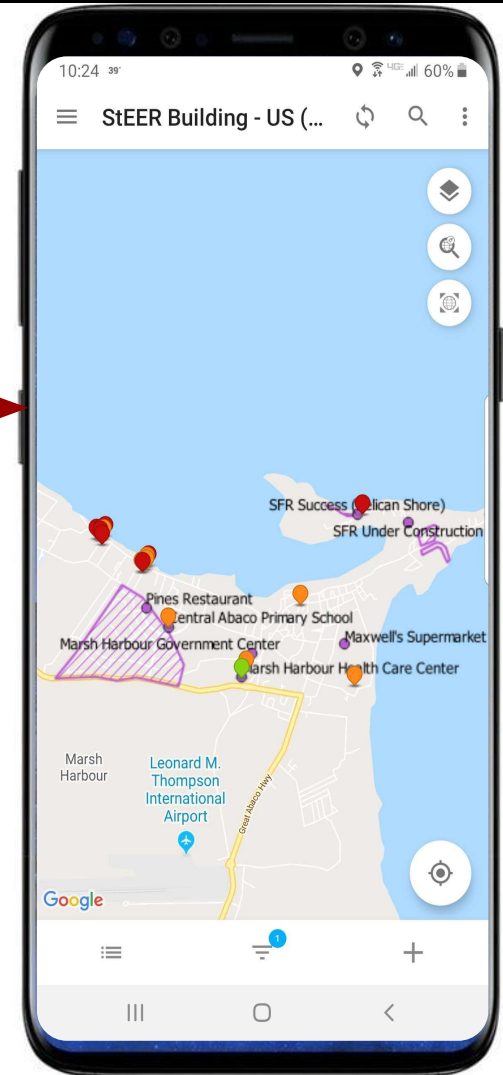

Multiple data types contained within a single, geolocated record that is easily exportable to common formats: Excel, ESRI Shapefile, GeoJSON, etc

# PRE-DEPLOYMENT MISSION DESIGN

Targets synced  
to Fulcrum for  
offline access  
by FAST

- Satellite imagery, social media used to identify points of interest (successes and failures)
- Representative samples chosen across a diversity of structure typologies
- Typologies matched with expertise of FAST members where possible
- **Pre-selected targets are recommendations - not absolute**

# MIXED-METHODOLOGICAL STRATEGY

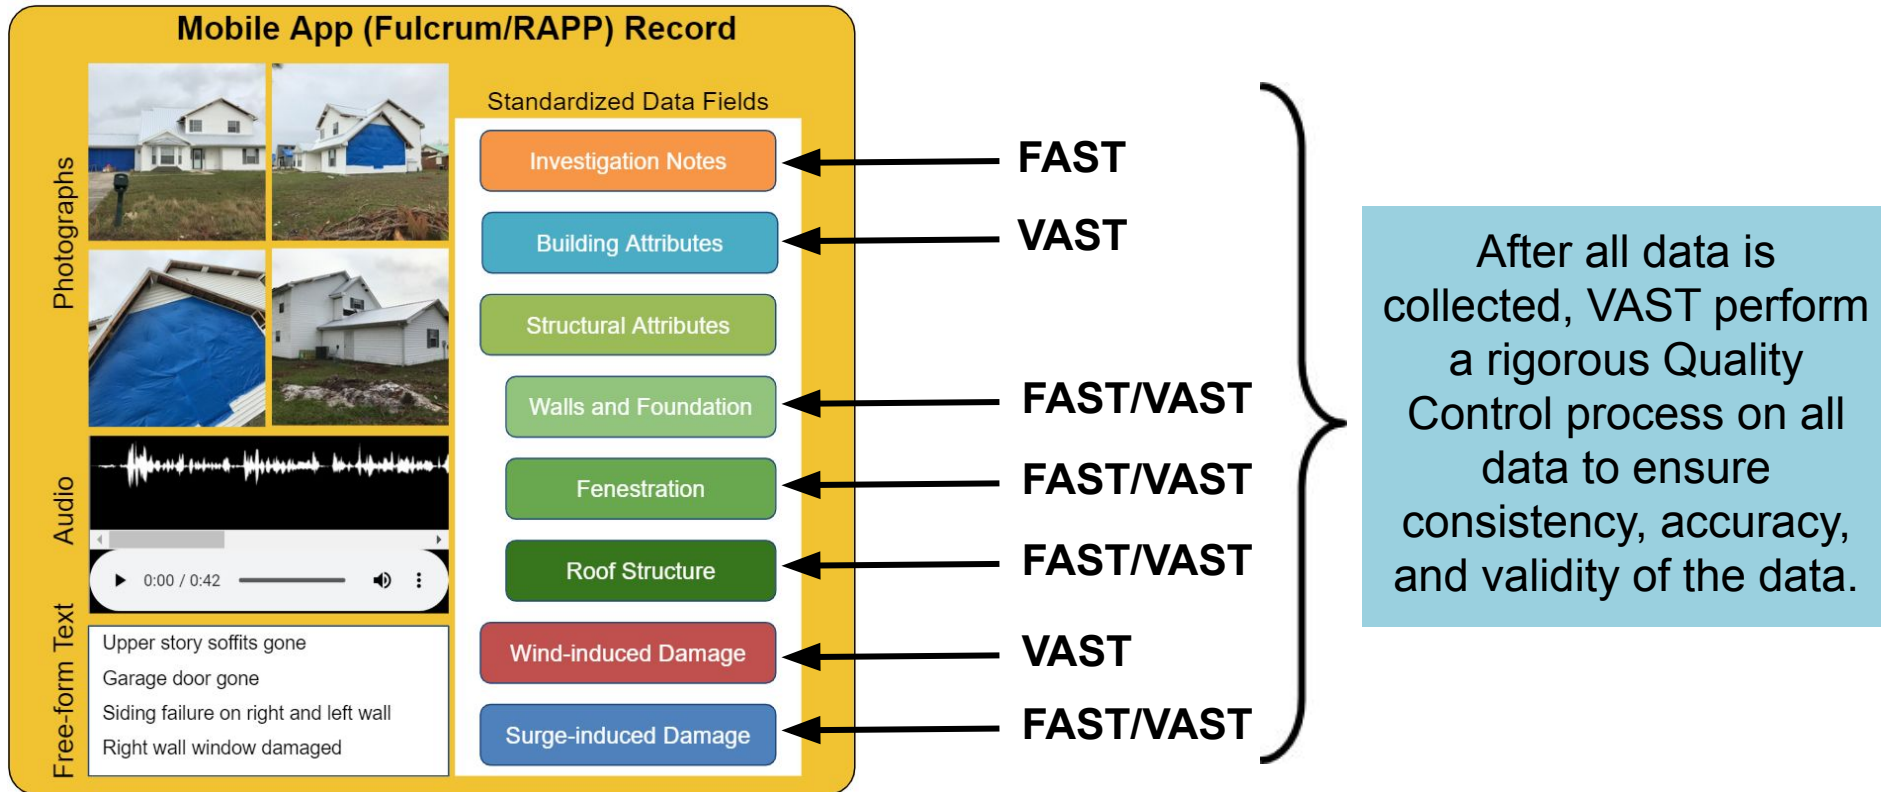

Overlapping data collection technologies ensure D2D teams can sample efficiently in the field while still capturing the context and broad damage patterns

# DATA ENRICHMENT AND QUALITY CONTROL

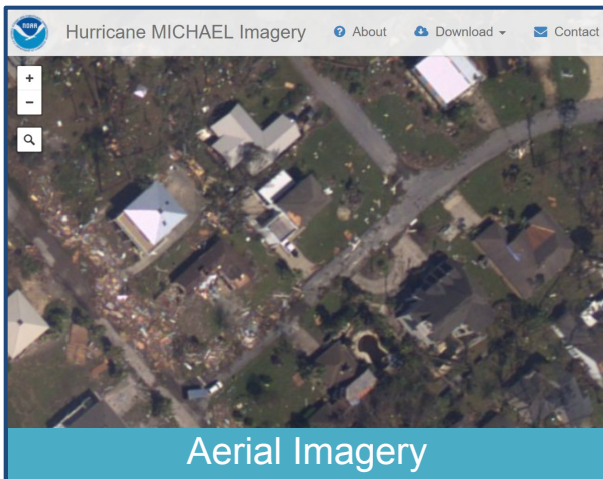

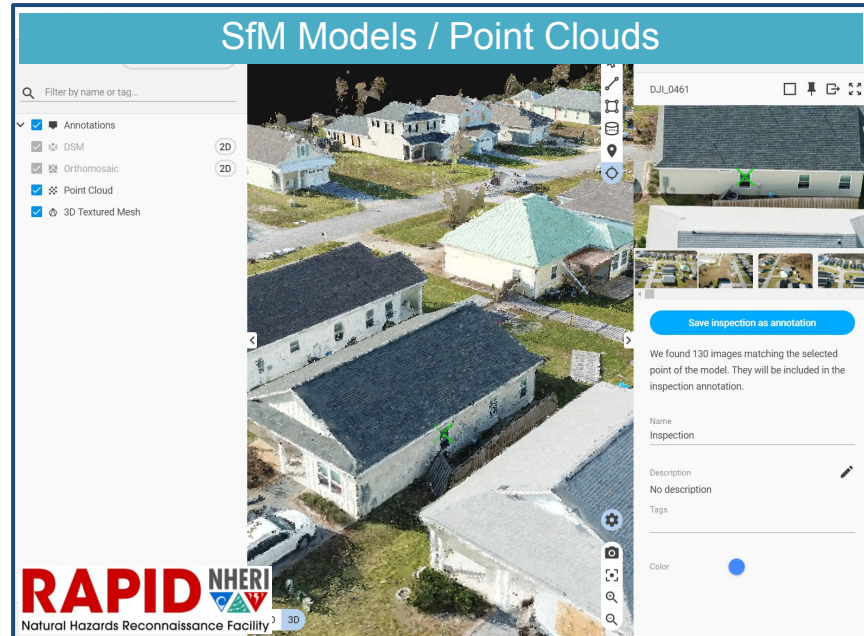

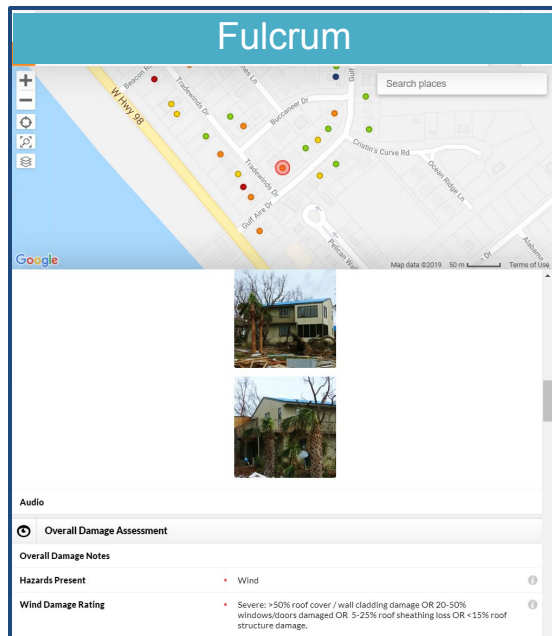

Field Priority data is captured by FAST on-site. Remaining data is collected by the VAST using the FAST data (all contained within the Fulcrum record) and any available supplemental data.

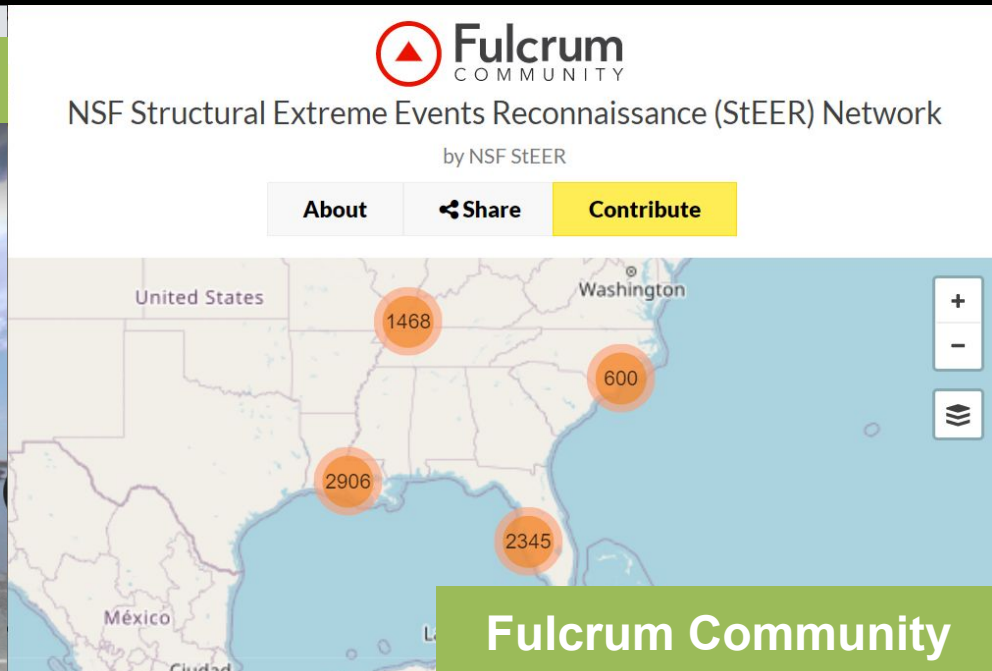

Data Enrichment and Quality Control (DEQC) process is an excellent training opportunity for StEER Level 1 and 2 members and students.

# SUPPLEMENTAL DATA SOURCES FOR DE/QC

# DISSEMINATION OF DATA AND KNOWLEDGE

## DesignSafe Datasets

Buildings. Classes include residential, commercial, and industrial. Damage assessments in Fulcrum, UAS and

## Detailed Reports

Puerto Rico.

StEER: Building Resilience through Reconnaissance

## CLOSING REMARKS

StEER: Building Resilience through Reconnaissance

# OUR DISTINCTIVE APPROACH

## EARLY

Centralized event response with strategic mission objectives

## EFFICIENT

Leveraging virtual reconnaissance

## IMPACTFUL

Enriched, standardized and quality controlled data suitable for diverse re-uses

# ACKNOWLEDGEMENTS

- **StEER is funded by the US NSF (Award No. CMMI 18-41667)**

Any opinions, findings, and conclusions or recommendations expressed are those of the author(s) and do not necessarily reflect the views of the National Science Foundation

- **CONVERGE node and wider Extreme Events consortium:**
