

We envision a just and equitable world where knowledge is applied to ensure that humans live in harmony with nature.

CONVERGE: NHERI's Social Science Facility

Rachel Adams, PhD, MPH

Research Associate Natural Hazards Center and CONVERGE University of Colorado Boulder

NSF Award #1841338

The Natural Hazards Center

Mission: We are the National Science Foundation-designated information clearinghouse for the **societal** dimensions of hazards and disasters. We are dedicated to reducing disaster harm through:

- 1. translating and sharing hazards and disaster research and information;
- 2. building connections between researchers, non-profit and private sector professionals, the media, policy makers, and local, state, and federal officials;
- advancing social science and interdisciplinary knowledge, with a special emphasis on the most vulnerable populations and places; and

hazards.colorado.edu/signup

4. training and mentoring the diverse next generation of hazards and disaster professionals.

CONVERGE

CONVERGE is a new National Science Foundation-Natural Hazards Engineering Research Infrastructure (NSF-NHERI) facility dedicated to:

- identifying researchers;
- educating and training researchers;
- setting a convergence research agenda that is problem-focused and solutions-based;
- connecting researchers and coordinating functionally and demographically diverse research teams; and
- supporting and funding convergence research, data collection, data sharing, and solutions implementation.

Received: 12 April 2020 Accepted: 16 June 2020 Published: 07 July 2020

Citation: Pook L, Tobin J, Adams RM, Wu H and Mathows MC (2020) A Framowck for Convergence Research in the Heaznds and Disaster Field: The Natural Hazards Engineering Research Infrastructure CONVERGE Facility. Front. Built Environ. 6:110. doi:10.3398/fbuil.2020.00110. The goal of this article is twofold: to clarify the tenets of convergence research and to motivate such research in the hazards and disaster field. Here, convergence research is defined as an approach to knowledge production and action that involves diverse teams working together in novel ways - transcending disciplinary and organizational boundaries - to address vexing social, economic, environmental, and technical challenges in an effort to reduce disaster losses and promote collective well-being. The increasing frequency and intensity of disasters coupled with the growth of the field suggests an urgent need for a more coherent approach to help guide what we study, who we study, how we conduct studies, and who is involved in the research process itself. This article is written through the lens of the activities of the National Science Foundation-supported CONVERGE facility, which was established in 2018 as the first social science-led component of the Natural Hazards Engineering Research Infrastructure (NHERI). Convergence principles and the Science of Team Science undergird the work of CONVERGE, which brings together networks of researchers from geotechnical engineering, the social sciences, structural engineering, nearshore systems, operations and systems engineering, sustainable material management, and interdisciplinary science and engineering. CONVERGE supports and advances research that is conceptually integrative, and this article describes a convergence framework that includes the following elements: (1) identifying researchers; (2) educating and training researchers; (3) setting a convergence research agenda that is problem-focused and solutions-based; (4) connecting researchers and coordinating functionally and demographically diverse research teams; and (5) supporting and funding convergence research, data collection, data sharing, and solutions implementation

Keywords: convergence research, natural hazards, disasters, interdisciplinary, transdisciplinary, training, Science of Team Science, research coordination networks

SSEER SOCIAL SCIENCE EXTREME EVENTS RESEARCH

with Web AppBuilder for ArcGIS

Welcome to the Social Science Extreme Events Research (SSEER) web map, which is an initiative of the <u>CONVERGE</u> project headquartered at the Natural Hazards Center.

SSEER is a National Science Foundationsupported network for social science hazards and disaster researchers. The purpose of SSEER is to identify and connect social science researchers to one another, to interdisciplinary teams, and to communities at risk to and affected by hazards and disasters.

The SSEER Researchers interactive web map highlights the location of SSEER researchers and includes information about them, including their organizational affiliations, job titles, disciplinary foci, methodological expertise, the types of hazards and disasters they study, the events they have researched, and other

Data Ambassadors

CONVERGE Data Ambassadors

CONVERGE Data Ambassadors have completed a National Science Foundation-supported Publish Your Data! training session. As Data Ambassadors, they have committed to publishing their own data and instruments on DesignSafe, to learning about the CONVERCE and RAPID facilities and their resources, and to sharing their newly attained knowledge with other social and behavioral scientists and colleagues from other allied disciplines in the hazards and disaster field. CONVERGE Data Ambassadors will help usher in a culture shift toward data publication and data and instrument sharing across disciplines.

The following page includes a list of instruments, reports, protocols, and other research materials published by the CONVERGE Data Ambassadors via the DesignSafe Cyberinfrastructure.

COVID-19 Research Registry

The COVID-19 pandemic underscores the urgent need for coordination, collaboration, and information-sharing among researchers worldwide. We hope those who are studying the human and societal impacts of this crisis will join this effort to build a global registry for public health and social science research.

Learn More

COVID-19 Quick Response Research Grants

This is a list of recently funded COVID-19 Quick Response Research. These were awarded by the Natural Hazards Center as part of two distinct special calls for research on this global crisis. Within three months of completing data collection, researchers submit an abstract and 10-page report detailing their preliminary findings. Completed reports are available on the Quick Response Reports page.

COVID-19 Virtual Forums

CONVERGE virtual forums bring together researchers to coordinate and collaborate after major events. Please check here for upcoming virtual forums and recordings of past forums.
